AIMS' Stand Alone, Cloud-Based Electronic Motor Fuel Tax Filing Solution

Fuel tax reporting can be a complicated matter, but AIMS makes it a breeze with **AutoTax!**

More and more states either require or allow petroleum marketers to file motor fuel tax reports electronically. There are two main formats used among these states: the so-called "flat file" type, which is a variety of text file, or EDI type ("EDI" stands for "electronic data interchange"). Over time, EDI may become the predominant electronic tax filing format. It is certainly probable somewhere in the future all states will require or allow some form of electronic tax filing.

AIMS has created AutoTax as a cost effective automated software solution for electronically filing excise motor fuel taxes for states who require Electronic Data Interchange (EDI), XML or have other unique filing formats. AutoTax imports motor fuel excise tax data provided by your current accounting system and converts that data to the proper file format. It simplifies the e-filing and reporting process for motor fuel excise taxes. AutoTax will accept a .csv data file produced by the marketer's current accounting software, map that data according to EDI standards, and create a file that can be transmitted to a state's revenue department.

Because AutoTax is a cloud-based solution, it requires no additional hardware and installation of any new software at your location. Simply log into AutoTax, upload your file, run AutoTax to convert your file to the appropriate format and transmit the file. It's really that easy.

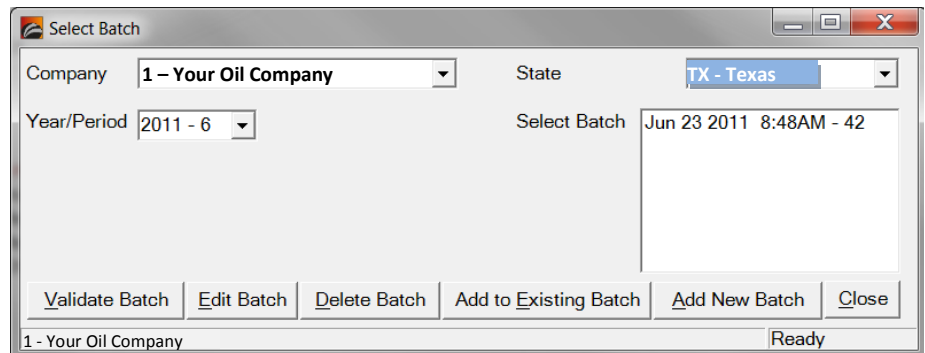

AIMS' COMPAS 8.0 and COMPAS Commander clients already have the capability of producing .csv files directly from our accounting software. Once these files have been built, simply choose the "export" option to move the data into the EDI conversion software. It only takes seconds and nothing ever has to be re-keyed.

Just like AutoSend and AutoSIR, AutoTax can be used by marketers who aren't yet AIMS customers. You no longer need to use another 3rd party solution for tax reporting. Minimal training is required, and can easily be conducted via the web.

Rely on AIMS for solutions. We're dedicated to providing the essential software tools and services that make your business manageable and more profitable. For more information about AutoTax, please contact us at 318.323.2467 or info@aims1.com.

Using AutoTax is as easy as 1, 2, 3

1. After logging into AutoTax, upload your file;
2. Run AutoTax to convert your file;
3. Transmit the file to the appropriate agency.

A Better Way.
